<b>Internal EPD Reviewed by</b>	 Nana Bortsie-Aryee, Global GreenTag International

The EPD is property of declared manufacturer. Different program EPDs may not be comparable as e.g. Australian transport is often more than elsewhere. Comparability is further dependent on the product category rules used and the source of the data. EPDs of construction products may not be comparable if they do not comply with EN15804. Further explanatory information is found at [globalgreentag.com](http://globalgreentag.com) or contact: [epd@globalgreentag.com](mailto:epd@globalgreentag.com).

This Environmental Product Declaration (EPD) discloses potential environmental outcomes compliant with EN 15804:2012+A2 2019 for business-to-consumer communication. LCIA results are relative expressions that do not predict impacts on category endpoints, exceeding of thresholds, safety margins or risks.

### Product Information

<b>Product Name</b>	Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel	
<b>Description</b>	Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel are a series of acoustic products made from FilaSorb which is 100% polyester composition, and applied to walls, ceilings.	
<b>PCR</b>	CEN Standard EN 15804+A2 2019 serves as core Product Category Rules (PCR) [PCR AIN:2021 - Acoustic Insulation(Global Green Tag International, 2021)]	
<b>Declared Unit/ Functional Unit</b>	The function unit is 1 m <sup>2</sup> of Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel with an average weight of 4.92 kg/m <sup>2</sup> from cradle to Gate with options, C1-C4 and module D	
<b>Manufacturer Warranty</b>	20 years	
<b>Manufacturing Site</b>	2650 N Opdyke Rd, Auburn Hills, MI, USA	
<b>Site Representation &amp; Geography</b>	USA	
<b>Cut-off criteria &amp; Data quality</b>	Complies with EN 15804+A2:2019	
<b>Standards</b>	This product complies with ISO 14044: 2006 EM: LCA: Requirement & guideline for data review: LCI; LCIA, Interpretation results: Include additional quality testing as required by PCR.	
<b>Restricted Substance List</b>	N/A	
<b>Functional &amp; Technical Performance</b>	Industrial, commercial and residential building interior acoustic products. Fire Test Method Number: ASTM E84-17a Class A Indoor Air Quality: Passed CDPH v1.2 Standard Test Method for VOC's <0.5 mg/m <sup>3</sup> Color Fastness: ISO 105-B02, 6-7	
<b>Range and variability</b>	Standard Thickness: 12mm   0.47" +/- 10% ~ 24mm   0.94" +/- 10% Dimensions: Custom size available upon request. .See Specification Sheet for more information.	
<b>Primary Data</b>	Data was collected in accordance with EN ISO 14044:2006, 4.3.2, from primary sources including factory audits, suppliers and their publications on corporate locations, logistics, technology, market share, management system, standards and commitment to improved environmental performance.	
<b>Substances of Very High Concern</b>	Contains no substances that exceed 0.1% (1000 ppm) in the "Candidate List of Substances of Very High Concern for authorisation" of the European Chemicals Agency	

## Manufacturing Process

Figure 1. Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel Cradle to Gate System Boundary

## Base Material Origin and Detail

Table 1 Lists key components and additives by function, type, key operation, source and amount for Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel Base Material

Product	Component	Material	Source	% mass
Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel	FilaSorb Panel	Polyethylene Terephthalate(post-consumer recycled) (total mass 60%); Polyethylene Terephthalate staple low melting fiber (total mass 40%)	Thailand	>95% < 100%
	Adhesive	Polyacrylic	US North Carolina	<5%

## Program Description

<b>EPD Scope</b>	Cradle to gate with options (A1 to A3, C1-C4 and D) as defined by EN 15804+A2 and depicted in Figure 1.
<b>System Boundary</b>	The system boundary with nature included processing material and energy system inputs, transport to factory gate, manufacturing plus packing, waste disposal, as well as waste removal and waste product disposal after the expiration of product life.
<b>Reference Service Life</b>	20 years <sup>1</sup>
<b>Comparability</b>	EPD of construction products may not be comparable if they do not comply with EN 15804.
<b>Product Stages Included</b>	<p>A1 Raw material supply</p> <ul style="list-style-type: none"> <li>• Raw material acquisition, extraction, refining and processing</li> <li>• Electricity generated from all sources with extraction, refining &amp; transport</li> </ul> <p>A2 Transport to the factory gate</p> <p>A3 Manufacture of product and packaging plus</p> <ul style="list-style-type: none"> <li>• Cutting, laminating</li> <li>• Using cardboard, palette, etc. to package the product</li> <li>• While some scrap is modeled as being disposed of in a landfill</li> </ul> <p>C1, Disassembled product</p> <p>C2, Transport to waste processing</p> <p>C3, Waste processing for reuse, recovery and/or recycling</p> <p>C4, Disposal</p> <p>D, Reuse, recovery and/or recycling potentials, expressed as net impacts and benefits.</p>
<b>Cut Off Criteria</b>	In this study, the "Packing Tape S-1850", "Stretch Wrap", "Banding" used in the product packaging process were excluded in accordance with EN 15804: 2012+A2 2019 section 6.3.6, because they accounted for less than 1% of the total mass input for the overall life cycle. The sum of the neglected processes over their entire life cycle does not exceed 5% of energy use and quality. The manufacturer provides transport expenditure data for all relevant material flows. Excluding machines and facilities required in the production process.
<b>Stages Excluded</b>	A4-5, B1-7
<b>Data Collection Year</b>	2022
<b>Background Data</b>	Table 2
<b>Allocations Method</b>	<p>In this LCA study allocation is based on physical properties and is based on weight. For example, a variety of acoustic products are produced in one factory. The consumption (mainly electricity, raw material, packaging material consumption) of the target product is obtained by dividing the total annual production weight of each product by the total weight of all the products produced in the factory, obtaining the weight ratio of target product, and then multiplying by the total data.</p> <p>In the factory production process, regarding the partially generated waste scraps and packaging material "Pallet" will be recycled, and since they are recycled within the factory, no allocation will be made for them.</p>

<sup>1</sup> The reference service life was determined by the manufacturer's extended warranty.

**Acoustic Laminated Panels**

<b>Scenario Modelling Assumption</b>	<p>Stage C - end of life: it is assumed that the product be disassembled manually and transported from building site to waste processing is 161 km (100 miles) by diesel-powered truck(unspecified).</p> <p>Stage D – benefits and loads beyond the system boundary: Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel are typically not reused or recycled following removal from a building. Thus, reuse, recycling, and energy recovery are not applicable for these product.</p>
<b>Product Average</b>	<p>The EPD is intended to represent an manufacturer specific Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel. The average is weighted based on the mass of product manufactured at Acoufelt LLC facility throughout 2022 year.</p>

**Background Data**

### Data Quality Assessment

The data quality assessment addressed the following parameters: time-related coverage, geographical coverage, technological coverage, precision, completeness, representativeness, consistency, reproducibility, sources of data, and uncertainty.

Table 3. Data quality assessment for the Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel system

Data Quality Parameter	Data Quality Discussion
Time-Related Coverage: Age of data and the minimum length of time over which data is collected	The most recent available data is used, based on other considerations such as data quality and similarity to the actual operations. Typically, these datasets are less than 2 years old (typically 2022). All of the data used represented an average of at least one year's worth of data collection, and up to two years in some cases. Manufacturer-supplied data (primary data) are based on annualized production for 2022-2023.
Geographical Coverage: Geographical area from which data for unit processes is collected to satisfy the goal of the study	The data used in the analysis provides the best possible representation available with current data. Surrogate data used in the assessment are representative of global or rest of world operations. Data representative of rest of world operations are considered sufficiently similar to actual processes. Data representing product packing disposal are based on regional statistics.
Technology Coverage: Specific technology or technology mix	For the most part, data is representative of the actual technologies used for processing, transportation, and manufacturing operations. Representative fabrication datasets, specific to the type of material, are used to represent the actual processes, as appropriate.
Precision: Measure of the variability of the data values for each data expressed	All relevant foreground data is primary data, which is collected from on-site reviewing and supported by professional data input document. The activity data of the enterprise are all from enterprise statistics or on-site measured data, with high precision.
Completeness: Percentage of flow that is measured or estimated	The LCA model included all known mass and energy flows for production of the Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel. No known processes or activities contributing to more than 1% of the total environmental impact for each indicator are excluded.
Representativeness: Qualitative assessment of the degree to which the data set reflects the true population of interest	In this study, for all background processes representative primary data input based on specific industry averages which derived from various reliable databases and the data input for

Data Quality Parameter	Data Quality Discussion
	<p>foreground processes all obtained from on-site product related precise investigation. Data used in the assessment represent typical or average processes as currently reported from multiple data sources and are therefore generally representative of the range of actual processes and technologies for production of these materials. Considerable deviation may exist among actual processes on a site-specific basis; however, such a determination would require detailed data collection throughout the supply chain back to resource extraction.</p>
<p>Consistency: Qualitative assessment of whether the study methodology is applied uniformly to the various components of the analysis</p>	<p>In order to figure out that the LCA methodology can be uniformly applied or not, various component's qualitative assessment is conducted. The primary data input provided by manufacturers is re-checked and recalculated.</p>
<p>Reproducibility: Qualitative assessment of the extent to which information about the methodology and data values would allow an independent practitioner to reproduce the results reported in the study</p>	<p>Based on the description of data and assumptions used, this assessment would be reproducible by other practitioners. All assumptions, models, and data sources are documented.</p>
<p>Sources of the Data: Description of all primary and secondary data sources</p>	<p>Data representing energy use at Acoufelt LLC's facility in USA represent an annual average and are considered of high quality due to the length of time over which these data are collected. For secondary LCI datasets, Ecoinvent v3.9.1 LCI data are used.</p>
<p>Uncertainty of the Information: Uncertainty related to data, models, and assumptions</p>	<p>Uncertainty related to materials in the Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel is low. Actual supplier data for upstream operations was not available for all suppliers and the study relied upon the use of existing representative datasets. These datasets contained relatively recent data (&lt;2 years).</p>

## LCA Scenarios and Additional Technical Information

### Product stage (A1-A3)

The electricity consumption data of the production stage is calculated based on the power and usage time of the instruments used in each process, and these calculated electricity consumption data are verified by the manufacturer. In addition, the manufacturer claims that the electricity used during the production stage comes from DTE, but there is no specific producer's electricity in the background database, so there is an approximate replacement by market group for electricity medium voltage from Ecoinvent database;

For raw and auxiliary materials imported from foreign countries, only the sea transportation distance was counted, and the road transportation distance was assumed to be 161 km.

The raw material UV Ink can't be found in background database, they were substituted by organic chemical from Ecoinvent database.

### EoL stage (C1 - C4, D)

**Acoustic Laminated Panels**

The disposal stage includes demolition of the products (C1): These products can be disassembled manually, so no resource and material consumption and no environmental emissions are generated during demolition.

Transport of these disassembled products to waste treatment facilities (C2): Assumes a 161 km average distance to disposal with unspecified diesel truck. The data for waste transportation per tkm are obtained from Ecoinvent 3.9.1. The functional unit was defined as diesel trucks completing 1 tkm on the suburb's highway with unspecified load capacity.

Waste processing (C3): It is assumed that the dismantled product is hauled directly to landfill site, so there is no additional waste disposal process.

Waste disposal(C4): It is assumed that dismantled products are disposed of in landfill.

Table 4. EoL parameters for Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel, per 1 m<sup>2</sup>

Processes	Unit	Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel
Collection Process	kg: collected separately	4.92
Transportation	km	161
Recovery System	kg: landfill	4.92

(D):According to the information provided by the manufacturer, the vast majority of the product covered in this report will be disposed of in landfills, and the product do not contain biogenic carbon, to be conservative, assuming that the product does not involve reuse, recovery and/ or recycling potentials.

### Information Modules

The LCA and EPD declare results for default A1-A3, C1-C4 and D information modules as shown in Figure 2. Optional modules and stages A4-A5, B1-B7 are excluded and are marked Not Declared (ND). ND does not indicate zero inventory or impact results.

	Product			Construction		Use stage of building fabric and operation							End of life stage				Resource recovery stage
	A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
	Raw material supply	Transport	Manufacturing	Transport	Construction installation	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal	Reuse-Recovery-Recycling-potential
Modules	✓	✓	✓	ND	ND	ND	ND	ND	ND	ND	ND	ND	✓	✓	✓	✓	✓
Modelling	Actual			Scenarios													Optional

MND = Module not declared ✓ = included

Figure 2. Phases and Stages Cradle to Gate

The description of life cycle stage A-D are as follows:

A1 Extraction and processing of raw materials for the Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel components.

A2 Transport of component materials to the manufacturing facilities

A3 Manufacturing of Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel and packaging

A4 Transport of product (including packaging) to the building site (ND)

A5 Install the product (ND)

B1 Use of the Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel in a building setting (ND)

B2 Maintenance of the usage phase (ND)

B3-B5 Repairing, replacing and refurbishing during the use phase (ND)

B6 Energy use during the use phase (ND)

B7 Water use during the use phase (ND)

C1 Demolition of the products is accomplished by using hand tools

C2 Transport of waste Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel to local recycling centre at end-of-life

C3 No other waste processing

C4 Waste Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel are landfilled

D Waste Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel are landfilled and thus benefits are declared to be zero

## Product Results

The environmental impact category indicators are also reported based on the EFv3.1 characterization factors according to EN15804.

Table 5. LCA impact indicators

<b>Core Environmental Impact Indicators</b>		
Impact category	Indicator	Unit
Climate change - fossil	GWP-fossil	kg CO <sub>2</sub> eq
Climate change - biogenic	GWP-biogenic	kg CO <sub>2</sub> eq
Climate change - land use and land use change	GWP-luluc	kg CO <sub>2</sub> eq
Climate change – total	GWP-total	kg CO <sub>2</sub> eq
Ozone Depletion	ODP	kg CFC 11 eq.
Acidification	AP	mol H <sup>+</sup> eq.
Depletion of abiotic resources -fossil fuels	ADP-fossil	MJ, net calorific value
Eutrophication aquatic freshwater	EP-freshwater	kg P eq.
Eutrophication aquatic marine	EP-marine	kg N eq.
Eutrophication terrestrial	EP-terrestrial	mol N eq
Photochemical ozone formation	POCP	kg NMVOC eq.
Depletion of abiotic resources -minerals and metals	ADP-minerals&metals	kg Sb eq.
Depletion of abiotic resources -fossil fuels	ADP- fossil	kg Sb eq.
Water use	WDP	m <sup>3</sup> world eq
<b>Additional Environmental Impact Indicators</b>		
Impact category	Indicator	Unit
Particulate Matter emissions	PM	Disease incidence
Ionizing radiation, human health	IRP	kBq U235 eq
Eco-toxicity (freshwater)	ETP-fw	CTUe
Human toxicity, cancer effects	HTP-c	CTUh
Human toxicity, non-cancer effects	HTP-nc	CTUh
Land use related impacts/ Soil quality	SQP	dimensionless

Results of the Life Cycle Assessment are presented below.

Interpretation

Figure 3. Layered Baffle each stage contribution to LCA results

Figure 4. Creative Cut Screens each stage contribution to LCA results

Figure 5. Fracture Tiles each stage contribution to LCA results

Figure 6. Pixel each stage contribution to LCA results

For the given figures, for Layered Baffle, Creative Cut Screens, Fracture Tiles, Pixel product the A1-A3 manufacturing module presents the high proportion of total environmental impacts for all indicators in the modelled life-cycle modules (A1-A3, C1-C4 and D).

For the indicator EP-marine, the high contribution of the C4 phase compared to other indicators is due to direct emissions such as total organic carbon during waste disposal (Treatment of waste polyethylene terephthalate, sanitary landfill).

The LCA study has been carried out based on available data, information, regional and global knowledge and experience to achieve more possible accuracy, completeness and representative of the results. No known flows are deliberately excluded from this EPD.
